AI SECURITY ENGINEER • RESEARCH @ CyLAB • AVAILABLE FOR FULL-TIME ROLES STARTING MAY 2027

EDUCATION

Carnegie Mellon University, Information Networking Institute **Pittsburgh, PA**
Master of Science in Artificial Intelligence Engineering - Information Security **August 2025 - May 2027**
Coursework: ML with Adversaries in Mind, Usable Privacy and Security, AI in Business Modeling, Ethical Pen Testing

Visvesvaraya Technological University, B.M.S College of Engineering **Bangalore, India**
Bachelor of Engineering in Computer Science **December 2021 - June 2025**
Relevant Coursework: ML, Cryptography, DBMS, Data Analysis, Computer Networks, Object-Oriented Java, Blockchain

SKILLS

AI / LLM Security: Agent defenses, prompt-injection evals, adversarial ML, LLM-as-judge pipelines
Machine Learning: PyTorch, TensorFlow, Scikit-learn, ONNX, feature engineering, model deployment
Systems & Agents: Python, LangGraph, FastAPI, Kotlin/Android, Docker, Kubernetes, Git, Linux
Data & Infra: Pandas, NumPy, PostgreSQL, CI/CD, AWS, GCP

EXPERIENCE

CyLab, Carnegie Mellon University – Summer Research Intern, Pittsburgh, PA **May 2026 – August 2026**

- Co-first author of Self-Evolving Defense (SED), a training-free framework that hardens LLM agents by converting judged attack failures into reusable security policies for safer tool; ACL Rolling Review (ARR) paper.
- Built and benchmarked the SED defense evaluation pipeline in Python across AgentDojo, DTap, HarmBench, and RedCode. Delivered a Dockerized SWE-bench Verified packaging of FCV (Functionally Correct yet Vulnerable) coding-agent evaluation for IARPA's BENGAL program Test & Evaluation (T&E) at Los Alamos National Laboratory (lanl.gov), enabling national-lab evaluators to reproduce results without local setup.

Samsung Prism, Research and Development Intern, Bangalore, India **March 2024 – September 2024**

- Designed Bixby Smart Notification, an Android R&D app classifying 10,000+ notifications for Samsung's virtual assistant (NotificationListenerService + Random Forest).
- Collected data with privacy safeguards; 93.15% accuracy; deployed inference via ONNX for on-device use.

ACADEMIC PROJECTS

OpenRole: AI Job Search Agent – CMU 14-789 **Spring 2026**

- Built a LangGraph multi-agent system (FastAPI, Next.js) that scouts roles, maps hiring teams, and drafts outreach with human-in-the-loop review before any external action.
- Shipped PostgreSQL-backed pipelines with 220+ automated tests and multi-provider LLM routing.

JailVax: Provable LLM Jailbreak Defense – CMU 14-795 **Spring 2026**

- Built an adversarial self-play defense that discovers jailbreak attacks and strengthens LLM resistance with Z3-based formal safety verification.

KAAI AstroAgent – Keystone Astronomy & AI / CMU McWilliams Research Collaboration

- Building a catalog-grounded LangGraph multi-agent system for astronomical data retrieval with SIMBAD/NED grounding, AION embedding similarity, dual validation so numeric claims require provenance before synthesis.
